ABSTRACTED-PUB-NO: EP 576005A

BASIC-ABSTRACT:

A first drum (19) is rotatably arranged and having a peripheral surface for carrying

paper web (Pw) as a first drum (19) rotates. A shredder is provided for shredding the paper web (Pw) into paper pieces of a specified length. The shredder includes a common shaft (36) arranged in parallel to the first drum (19).

A pair of free rollers (42) are rotatably mounted on the common shaft at both sides of the second drum (20). The shredder comprises supports (30,31,32) for supporting the second drum (20) and the pair of free rollers (42), so that they are allowed to move toward or away from the peripheral surface of the first drum (19).

USE/ADVANTAGE - Cigarette mfr. machine is capable of maintaining paper web shredding performance for a long time and of ensuring prolonged service life.

EQUIVALENT-ABSTRACTS:

A first drum (19) is rotatably arranged and having a peripheral surface for carrying paper web (Pw) as a first drum (19) rotates. A shredder is provided for shredding the paper web (Pw) into paper pieces of a specified length. The shredder includes a common shaft (36) arranged in parallel to the first drum (19).

A pair of free rollers (42) are rotatably mounted on the common shaft at both sides of the second drum (20). The shredder comprises supports (30,31,32) for supporting the second drum (20) and the pair of free rollers (42), so that they are allowed to move toward or away from the peripheral surface of the first drum (19).

USE/ADVANTAGE - Cigarette mfr. machine is capable of maintaining paper web shredding performance for a long time and of ensuring prolonged service life.

US 5350126A

The device is equipped with a receiving drum, the peripheral surface being formed as a suction surface. A bladed drum has a pair of free rollers which rotate in contact with the peripheral surface or the receiving drum.

A pair of rocking arms support the bladed drum and the pair of free rollers so that they are free to rock. A pair of pressure springs urge these rocking arms toward the receiving drum. The urging force of these pressure springs press the pair of free rollers against the peripheral surface of the receiving drum with a specified force.

USE - A shredding device for paper web.
